OBJECTIVE

Internship as a Backend Developer or in the Database area, applying knowledge in programming, data structures, and software engineering, with a focus on efficient and secure development.

ACADEMIC BACKGROUND

Bachelor of Science in Computer Science

Expected Graduation: December 2028

PUC Minas - Pontifical Catholic University of Minas Gerais

TECHNICAL SKILLS

Languages:	Java, Python, C, C#, Lua, Delphi
Databases:	MySQL
Tools:	Git, Microsoft Office Suite (Word, Excel, PowerPoint)
Concepts:	Programming logic, data structures, object-oriented programming (OOP), version control

PROFESSIONAL / ACADEMIC EXPERIENCE

Algorithms and Data Structures II Teaching Assistant

2025

PUC Minas

- Provided guidance and technical support to undergraduate students in developing algorithmic logic and implementing advanced data structures.
- Assisted with code debugging, troubleshooting, and code complexity analysis for backend programming languages.

Integrated Project: Mobile Development Teaching Assistant

2025

PUC Minas

- Supported students with technical development on their projects, aiding in structural architecture and solution integration.
- Reviewed programming logic and essential connectivity concepts required for integrated applications.

Calculus I Teaching Assistant

2023

PUC Minas

- Conducted problem-solving sessions and tutoring for complex mathematical problems, strengthening structured logical reasoning applicable to software engineering.

SOFTWARE DEVELOPMENT PROJECTS

Game Automation and Scripting System

Language: Python | GitHub: farmer-was-replaced-scripts

- Engineered Python scripts designed for logical automation and state-based decision-making within The Farmer Was Replaced game environment.
- Practiced control-loop design, script execution optimization, and the building of functional developer tooling for sequential task automation.

Task Management Application (ToDo List CLI)

Language: Python | GitHub: ToDo-List

- Built a terminal-based command-line interface (CLI) application for managing day-to-day tasks and notes.
- Focused on code quality and maintainability by applying Clean Architecture principles, function modularization, and structured data handling.

Home Security System with Arduino and Database Integration

Technologies: Arduino, C++, MySQL Database

- Developed a home automation ecosystem utilizing motion sensors and real-time image capture mechanisms.
- Responsible for building the core data capture logic, handling sensor inputs, and establishing MySQL database communication for robust security log persistence.

EVENTS AND EXTRA-CURRICULAR ACTIVITIES

Global Hack Week: Hacking for Good

June/2026

Major League Hacking (MLH)

- Participated in technical workshops and a hackathon focused on developing technology solutions for social good.
- Practiced agile software development and collaborated within a global community of developers.
- Advanced practice of English comprehension and technical communication during activities within a global community.

Python Sudeste Conference

2025

Associação Python Brasil (APyB)

- Attended lectures and technical discussions regarding the Python ecosystem, covering programming best practices, backend development, and new technology trends.

United Nations Model Simulations & International Organizations

2018 – 2021

Participations: SIS (2021, 2019), Jovem ONU Simulation (2019), CIMUN (2019), CSCJ MUN (2018)

- Consolidated experience in intercollegiate diplomatic committees modeled after United Nations frameworks, serving in strategic roles such as Delegate of Nations, Crisis/Boycott Committees, and International Press Journalist.
- Developed strong public speaking and communication skills, logical reasoning under pressure, persuasion, and emotional intelligence in negotiations. Practical experience in conflict resolution, fast-paced decision making, and summarizing complex information for drafting reports and agreements.

Colegio Sagrado Coracao de Jesus / JA Brazil

- Intensive tech-innovation and entrepreneurship boot camp. Worked collaboratively within a team to map market problems, engineer viable software-product ideas, and pitch structured proposals.
- Guided by executive mentorship focused on leadership architectures, market validation frameworks, and professional career development.

CogPlanner Course: Soft Skills and Planning Architectures**June/2019***Colegio Sagrado Coracao de Jesus | Workload: 17h*

- Practical training focusing on strategic planning, cognitive behavioral agility, and task optimization routes aimed at accelerating computer science engineering workloads.
- Specialized course led by a senior professional in educational psychology and behavioral learning focus.

CERTIFICATIONS AND ACHIEVEMENTS

OBMEP (Brazilian Mathematics Olympiad): Honorable Mention (2017)**Math Kangaroo:** Silver Medal (2016, 2017), Bronze Medal (2022)**LANGUAGES**

English: Fluent (B2 Level - Cambridge FCE Certificate)**Japanese:** Intermediate**French:** Basic**ADDITIONAL INFORMATION**

Internship Availability: Afternoon shift.

Proactive professional focused on building robust backend software, designing efficient relational databases, and optimizing algorithm processing paths.
